

Built to make one decision obvious at a time.

The reconciled system — the brand's typefaces, spacing, and form patterns, joined to the product's core discipline: a single Laser Yellow action per screen, on a calm dark workspace.

- Dark-first · Void Black
- Plus Jakarta Sans + Figtree
- Mono accent · precision only
- 8-pt spacing grid
- WCAG 2.1 AA

What changed in this revision

- Buttons: Primary is now **Laser Yellow** — the one decision per screen. Electric Purple moves to Secondary. (was: purple as the primary fill)
- Color roles: purple is the pervasive brand/voice color (links, reasoning, support); yellow is reserved for the single primary action; emerald and red are status/confirmation, used sparingly — not everyday button fills.
- Type: kept Plus Jakarta Sans + Figtree. Added one **narrow JetBrains Mono accent** for machine-precision moments (scores, timestamps, source citations) — not pervasive.
- Kept as-is: the 8-pt spacing scale, the form-input states with the purple focus ring, and the accessibility specs.
- Theme: the system is now **dark-first** (the workspace), with a light theme as the secondary surface for acquisition.

01 Color & the one-decision rule

Void Black is the canvas. **Electric Purple** is the brand's voice — it carries flow, reasoning, links, and secondary actions, so it appears often. **Laser Yellow** does the opposite job: it is rare on purpose, marking the single most important action on a screen. The contrast between "purple everywhere" and "yellow once" is what makes the next step unmistakable.

CORE PALETTE

Void Black #050505 App background. The calm workspace.	Electric Purple #8b5cf6 · 500 Brand voice · secondary actions · links · reasoning.	Laser Yellow #facc15 The one primary action. One per screen.	Emerald #10b981 · 34d399 Confirmed · positive · live status.
Red #ef4444 Destructive confirmations only.	Amber #f5a623 "I inferred this" / attention flag — never a button.	Surface / Raised #16161c · #1c1c24 Cards and raised elements on void.	Ink / Muted / Faint #f4f4f5 · #a2a2ac · #6b6b76 Primary, secondary, metadata text.

THE RULE

One Laser Yellow action per screen. It marks the single decision the artist is there to make. Everything else — supporting actions, navigation, links — is purple or neutral. On reference surfaces that only show or explain (the Context / memory page, the reasoning drawer) there is **no yellow at all**, because there is no single action to take.

02 Typography

Plus Jakarta Sans for headings — geometric, confident, with just-rounded corners for warmth. **Figtree** for body — humanist and highly readable for descriptions and long content. A single **JetBrains Mono** accent is reserved for machine-precision moments only.

WHY THIS PAIRING

Plus Jakarta Sans

HEADINGS

Structured, geometric, confident. The rounded corners add approachability without losing professionalism.

Figtree

BODY

Warm, humanist, open. Built for the readability that pitches, descriptions, and reasoning need.

JetBrains Mono

PRECISION ONLY

Reserved for the machine talking: confidence scores, timestamps, source citations. Signals "this is the system being exact." Never used for prose or headings.

03 Spacing

An **8-point grid**. Smaller steps (3xs–xs) bind related elements inside a component; larger steps (lg–4xl) separate sections and create breathing room. On mobile, drop one step (lg → md) to reclaim space while keeping the proportions.

--sp-3xs 2	Borders · focus indicators
--sp-2xs 4	Icon padding · tight gaps
--sp-xs 8	Field gaps · list item padding
--sp-sm 12	Button padding · icon-text gaps
--sp-md 16	Component padding · text spacing
--sp-lg 24	Card padding · section gaps
--sp-xl 32	Layout padding · modal spacing
--sp-2xl 40	Section separation · headers
--sp-3xl 48	Major sections · page headers
--sp-4xl 64	Hero sections · page margins

04 Buttons

The hierarchy carries the one-decision rule. **Primary is Laser Yellow and appears once** per screen. **Secondary is Electric Purple** for supporting actions. Ghost is neutral. Emerald and red are reserved for confirmation and destructive moments — not general-purpose fills.

05 Form inputs

Inputs sit on dark surfaces with a 1px border and an 8px radius. The **focus state is a purple ring** (3px, low-opacity) — the same purple that signals "Soniq is thinking" elsewhere. Error and success borrow emerald/red from the status palette.

06 Accessibility

Carried forward from the originals, and extended to the dark-first palette.

✓ Contrast — WCAG2.1AA

Body text ≥ 4.5:1, large text/UI ≥ 3:1 in both themes. Yellow primary uses dark ink (#1c1605) for AA on the fill; purple secondary text is verified on Void Black.

✓ Focus & keyboard

Visible focus on every control (the purple ring). Full Tab order; Enter/Space activate buttons; the Line-to-Soniq panel is reachable and dismissible by keyboard.

✓ Touchtargets

Interactive controls are ≥ 44×44px (medium button and up). Small/icon controls are reserved for dense, pointer-first contexts.

✓ Screenreaders

Loading and disabled states expose ARIA state; amber "inferred" flags and confidence scores have text equivalents, not color alone.
